Partners

Who Works With Us?

OnStream:

Starting in 1998 1Vision Software, Inc. partnered with OnStream, Inc., a spin-off of Philips Electronics, in the development of the OnStream Echo™ backup software for OnStream's breakthrough technology ADR tape drives. Echo is the first data management system to integrate drive-letter access, full automatic background backup, and direct restore capability to tape media. Every OnStream desktop drive ships with the OnStream Echo data management system from 1Vision Software.

Prior to partnering with OnStream, Inc., Dave Howard and other 1Vision Software founders served as consultants with Philips Electronics to develop software/firmware strategies for the tape product.

Iomega:

In 1999 Iomega and 1Vision Software, Inc. entered into a co-marketing agreement allowing Iomega customers to download 1Vision Software's 1Disk file management system from the Iomega web site. 1Disk greatly simplifies the use of Iomega's removable media products like Zip®, Jaz®, klik!™ and ZipCD™.

Imation:

In 1999 Imation began shipping 1Vision Software's 1Disk as part of the SuperDisk™ tools disk. SuperDisk users utilize 1Disk to find any file, anywhere, anytime.
